The finality of the rejection of the last Office action is withdrawn, and the amendment filed on 5/22/06 has been entered.

***Claim Rejections - 35 USC § 103***

Claims 82-89, 91-102, 104-115, and 117-120 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat. 6670586 in view of US Pat. 3668371 and US Pat. 6348676.

US'586 discloses an oven with opposed first 15A and second 15B quartz IR heaters and reflectors 95 for each. The claims differ from US'586 only in calling for a ceramic coating on the oven wall, and first and second *peak* wavelengths of 1.63 (or 1.65 microns) and 2.11 (or 2.05 microns) respectively. The lamps of US'586 emit IR light inherently comprising a plurality of wavelengths, since only a laser approaches single-wavelength radiant energy.

US'371 discloses, at col. 2, lines 7-15, a ceramic coating on an oven wall, which absorbs and re-radiates incident radiant energy. It would have been obvious to adapt the ceramic coating of US'371 to the oven of US'586 to allow self-cleaning. US'676 discloses, at Fig. 4 and col. 3, lines 53-60, that it was known at the time of the invention that the IR absorption spectrum depends strictly on the type of food being cooked (absorption is "1 – reflectance"). It would have been obvious to utilize the recited peak wavelengths since the choice depends strictly on the kind of food, and different first and second heater wavelengths are already well known in pizza ovens.

Claims 90, 103, and 116 are rejected under 35 U.S.C. 103(a) as being unpatentable over US'586 in view of US'371 and US'676, as applied to claims 82-120 above, and further in view of US Pat. 6654549.

The claim differs from US'586 in view of US'371 and US'676 only in recited a gold reflective film on the lamp tube. US'549 discloses, at Fig. 14b and col. 25, lines 43-44, a gold reflective film on a quartz lamp tube. It would have been obvious to adapt the gold film of US'549 to the heaters US'586 in view of US'371 and US'676, to improve heating of the food items, since gold has excellent IR reflectivity.

Claims 121-133 are rejected under 35 U.S.C. 103(a) as being unpatentable over US'586 in view of US'371, US'676, and 549, as applied to claims 90, 103, and 116 above, and further in view of US Pat. 4481404.

The claim differs from US'586 in view of US'371, US'676, and 549 only in recited a porcelain coating on the oven wall. US'404 discloses, at col. 1, lines 42-44, a porcelain coating on the oven wall, which absorbs and re-radiates incident radiant energy. It would have been obvious to adapt the porcelain coating of US'404 to the oven of US'586 in view of US'371, US'676, and 549 because it is a conventional alternative to ceramic in self-cleaning ovens.

***Applicant is urged to review the prior art cited but not applied when replying to this Office action, particularly the disclosure of the need to accommodate incident wavelength to the food item.***
